

# The Importance of Good Compression

**Good breast compression** is essential for an accurate mammogram. Compression improves the quality of your film and reduces the radiation dose to you. Compression does not damage breast tissue in any way and will not cause long-term discomfort.

**Beekley skin markers** will be used during your mammogram to provide the most accurate information to the Radiologist. Your Technologist may place the skin markers on nipples, raised moles, scars or a palpable mass for the best interpretation of your mammogram.

This facility truly **values you...** the patient...making your experience pleasant and comfortable as possible.

It is all about **Standard of Care, never settle for less.**
